This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1.   (currently amended) A method of transferring information in a first database (108) of a first electronic apparatus (102) to a second apparatus (104), comprising

uploading information from a first apparatus to a server that is remote from the first apparatus (106), the information stored in a first database of the first apparatus for use in the first apparatus, and the server accessible by a second apparatus that is remote from the first apparatus and the server;

determining whether the information is more recent than a copy of the information stored on the server;

updating the copy of the information with the uploaded information, if it is determined that the uploaded information is more recent;

manipulating ~~manipulation~~ the information at the server; and

downloading the manipulated information from the server to the second apparatus for storage in a second database (124) of the second apparatus for use in the second apparatus,

wherein the manipulated information can be automatically entered and updated into the second database for use by an application in the second apparatus requiring a predetermined data format regardless of communication compatibility between the first apparatus and the second apparatus.

2.   (previously presented) The method of claim 1, wherein:

- the first apparatus performs first communication functionalities using data stored in the first data base; and

- the second apparatus performs second communication functionalities using data stored in the second data base.

3.   (original) The method of claim 1, wherein each of the first and second apparatus comprises at least one of the following: a PDA with an Internet capability, a mobile phone, a wired phone, a pager.

4.   (original) The method of claim 1, wherein the information is uploaded via the Internet from the first apparatus to the server.

5.   (original) The method of claim 1, wherein the information is downloaded via the Internet to the second apparatus.

6.   (original) The method of claim 1, wherein the server keeps a copy of the information uploaded.

7.   (original) The method of claim 1, wherein the manipulating comprises at least one of the following:

        selectively extracting data from the uploaded information and converting a format.

8.   (previously presented) A method of providing a service for enabling to transfer information in a first database (108) of a first electronic apparatus (102) to a second apparatus (104), comprising:

        enabling to upload information from a first apparatus to a server that is remote from the first apparatus (106), the information stored in a first database of the first apparatus for use in

        Serial No. 09/464,866

the first apparatus, and the server accessible by a second apparatus that is remote from the first apparatus and the server;

enabling to determine whether the information is more recent than a copy of the information stored on the server;

updating the copy of the information with the uploaded information, if it is determined that the uploaded information is more recent;

enabling to manipulate the information at the server; and

enabling to download the manipulated information from the server to the second apparatus for storage in a second database (124) of the second apparatus for use in the second apparatus,

wherein the manipulated information can be automatically entered and updated into the second database for use by an application requiring a predetermined data format regardless of communication compatibility between the first apparatus and the second apparatus.

9.　(original)　The method of claim 8, wherein the enabling to manipulate comprises at least one of the following: selectively extracting data from the information and converting of a format.

10.　(original)　The method of claim 8, wherein:
- the first apparatus has a first communications capability based on the first data base;
- the second apparatus has a second communications capability based on the second data base;
- the first data base relates to a first communications directory; and
- the second data base relates to a second communications directory.

11.　(previously presented) A method for transferring data in a database of a first mobile terminal to a second mobile terminal, comprising:

providing a common server accessible to a first mobile terminal and a second mobile terminal, the terminals being remote from each other and the server, the first mobile terminal having at least a first application and associated first database for use in the first mobile terminal, and the second mobile terminal having at least a second application and associated second database for use in the second mobile terminal;

uploading data from the first application's first database to the common server;

associating the data with a particular user;

determining a format required by the particular user;

converting the uploaded data to conform to the format;

downloading the converted data automatically into the second database for use by the second application.

12.　(previously presented) The method of claim 11, wherein the first database includes a telephone directory.

13.　(previously presented) The method of claim 11, wherein the second database includes a telephone directory.

14.　(previously presented) The method of claim 11, wherein the first apparatus and the second apparatus includes one or more of a PDA, a pager, and a cellular telephone.

15.   (previously presented) The method of claim 1, wherein the manipulated information includes one or more telephone numbers automatically retrievable by the second apparatus to initiate a telephone call from the second apparatus.
